Open Annotation Community Group
<http://www.w3.org/community/openannotation/>

EUDAT Meeting
London, UK, March 11 2013

W3C Open Annotation Community Group

- Established after reconciliation of Open Annotation Collaboration and Annotation Ontology models
- 67 participants from around the world: 7th of 119 groups
Many universities, also commercial and not-for-profit

Mission:

Interoperability between Annotation systems and platforms, by

- ...following the Architecture of the Web
- ...reusing existing web standards
- ...providing a single, coherent model to implement
- ...without requiring adoption of specific platforms
- ...while maintaining low implementation costs

What is Annotation?

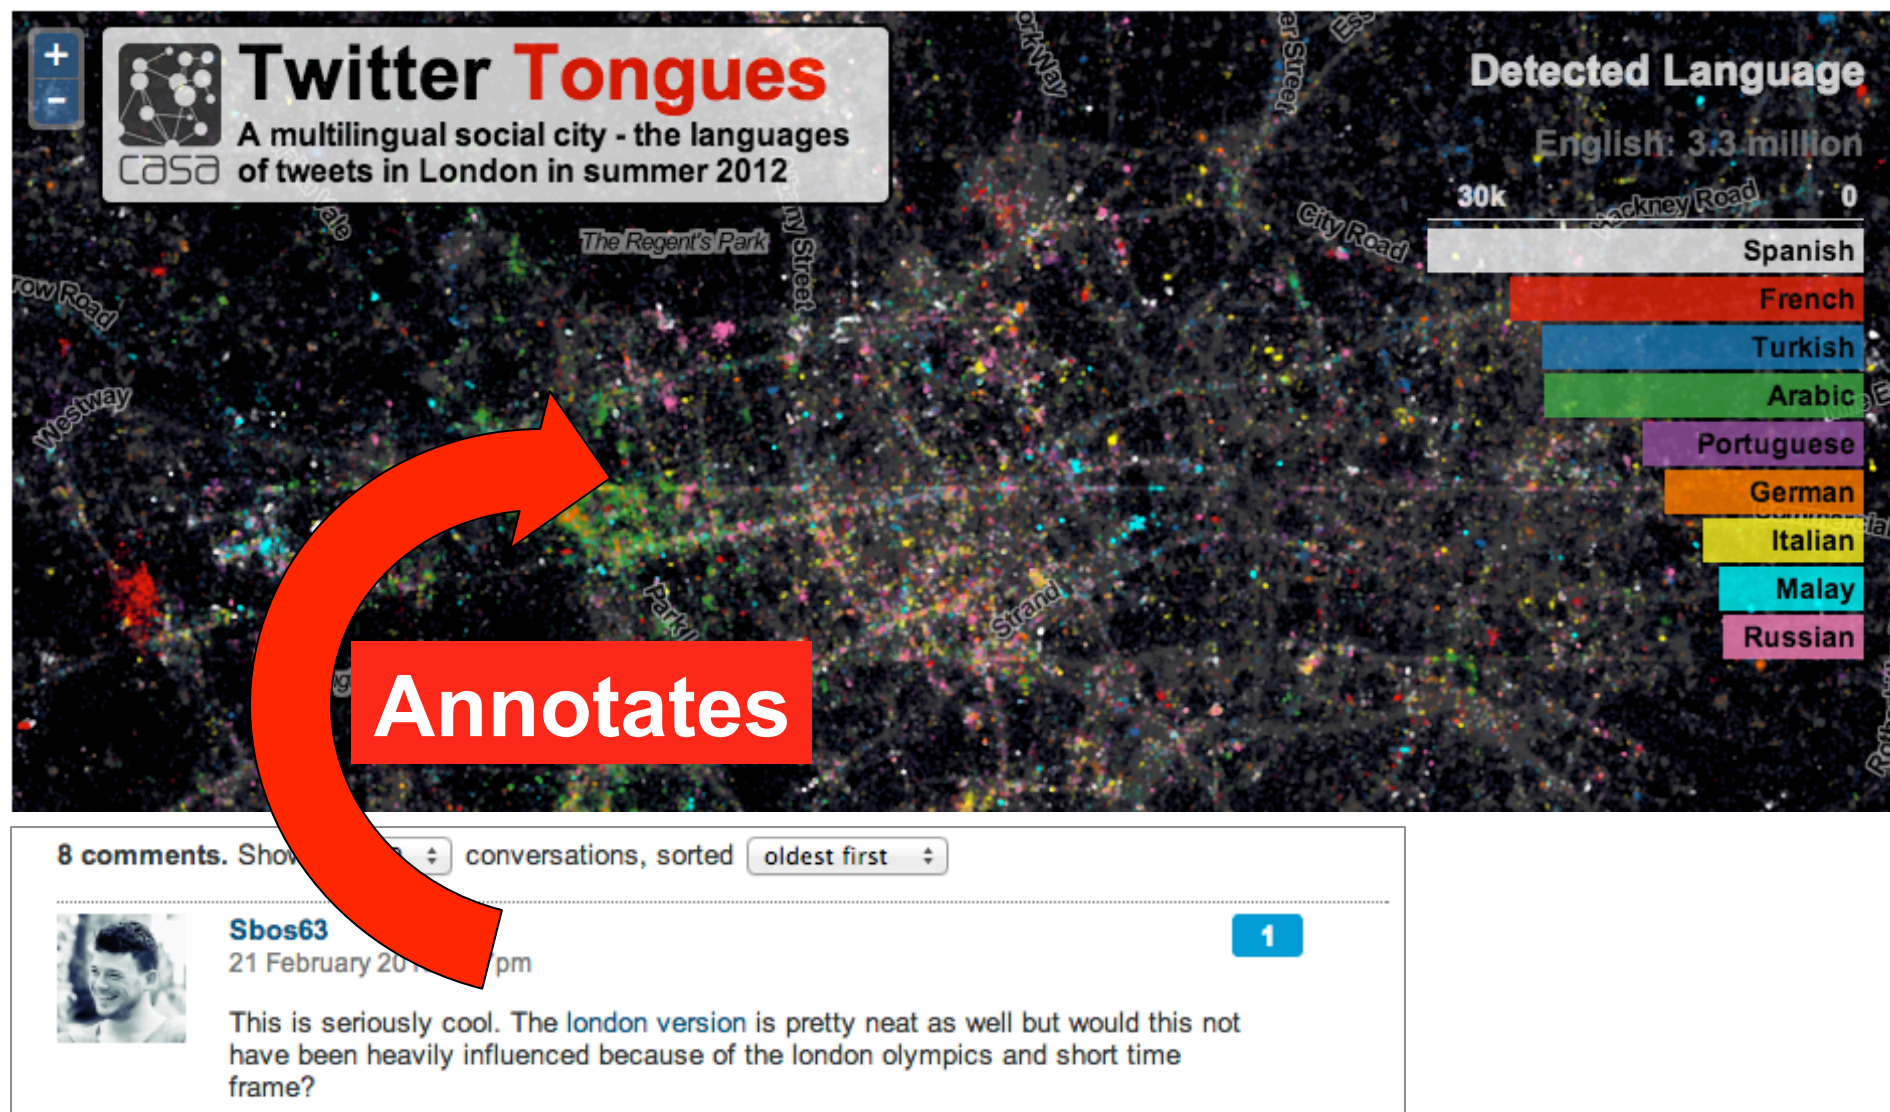

“ An Annotation is considered to be a set of connected resources, typically including a body and target, where the body is related to the target. ”

Users Annotate To:

- | | |
|------------------------------|---------------------------|
| ...Provide an Aide-Memoire | Highlighting, Bookmarking |
| ...Share and Inform | Commenting, Describing |
| ...Improve Discovery | Tagging, Linking |
| ...Organize Resources | Classifying, Identifying |
| ...Interact with Others | Questioning, Replying |
| ...Create as well as Consume | Editing, Moderating |

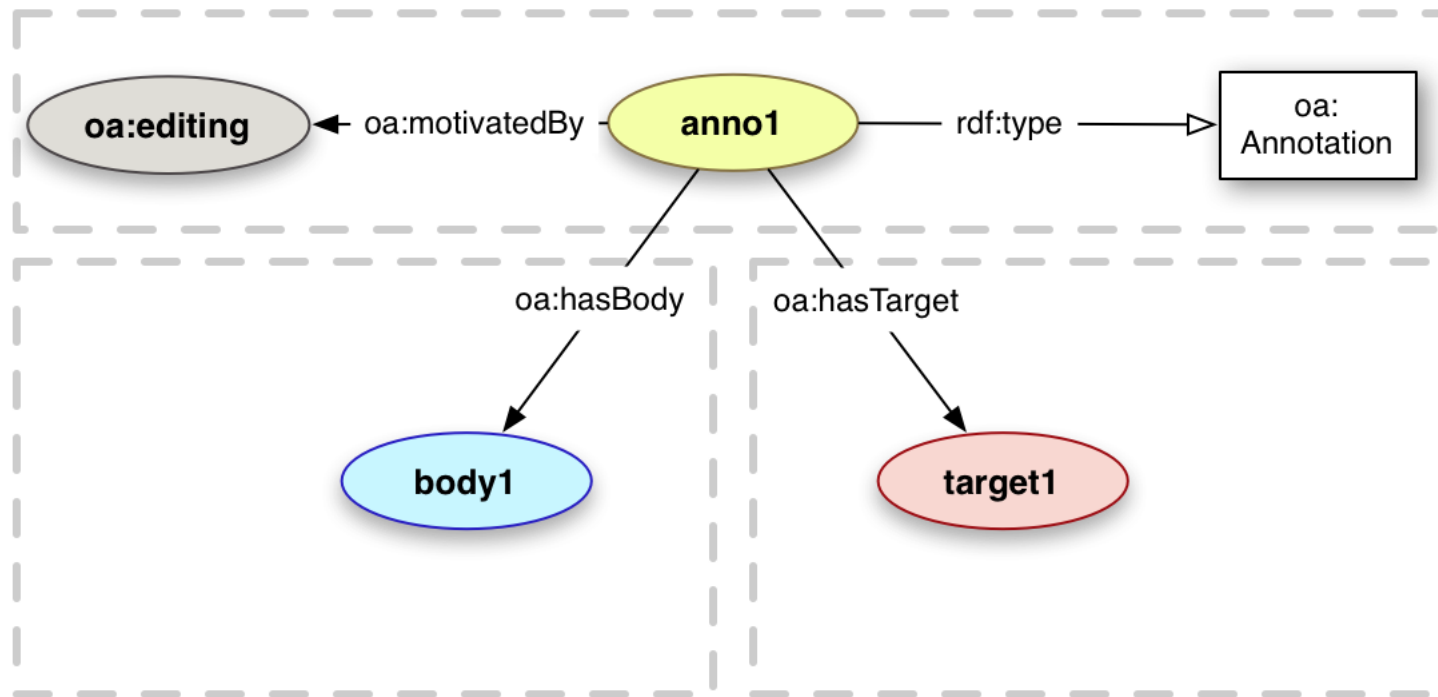

Annotations

Annotations?

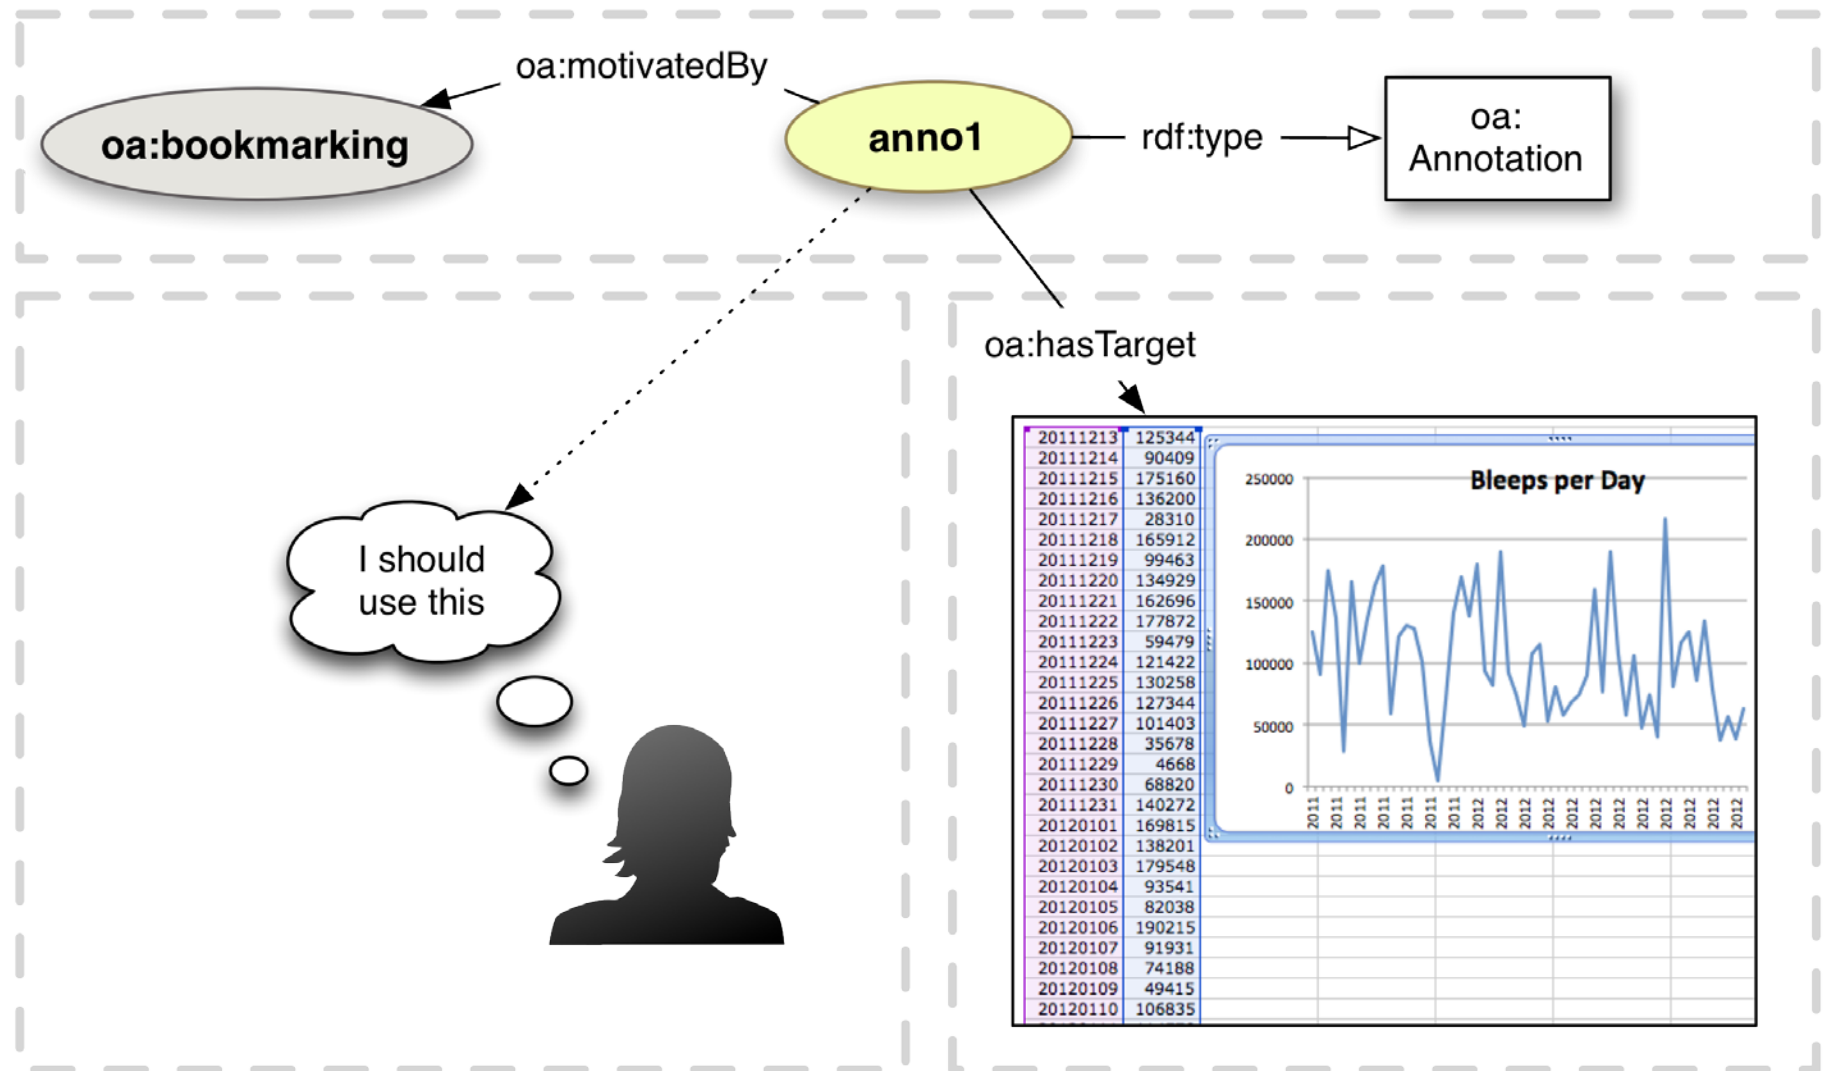

Basic Open Annotation Data Model

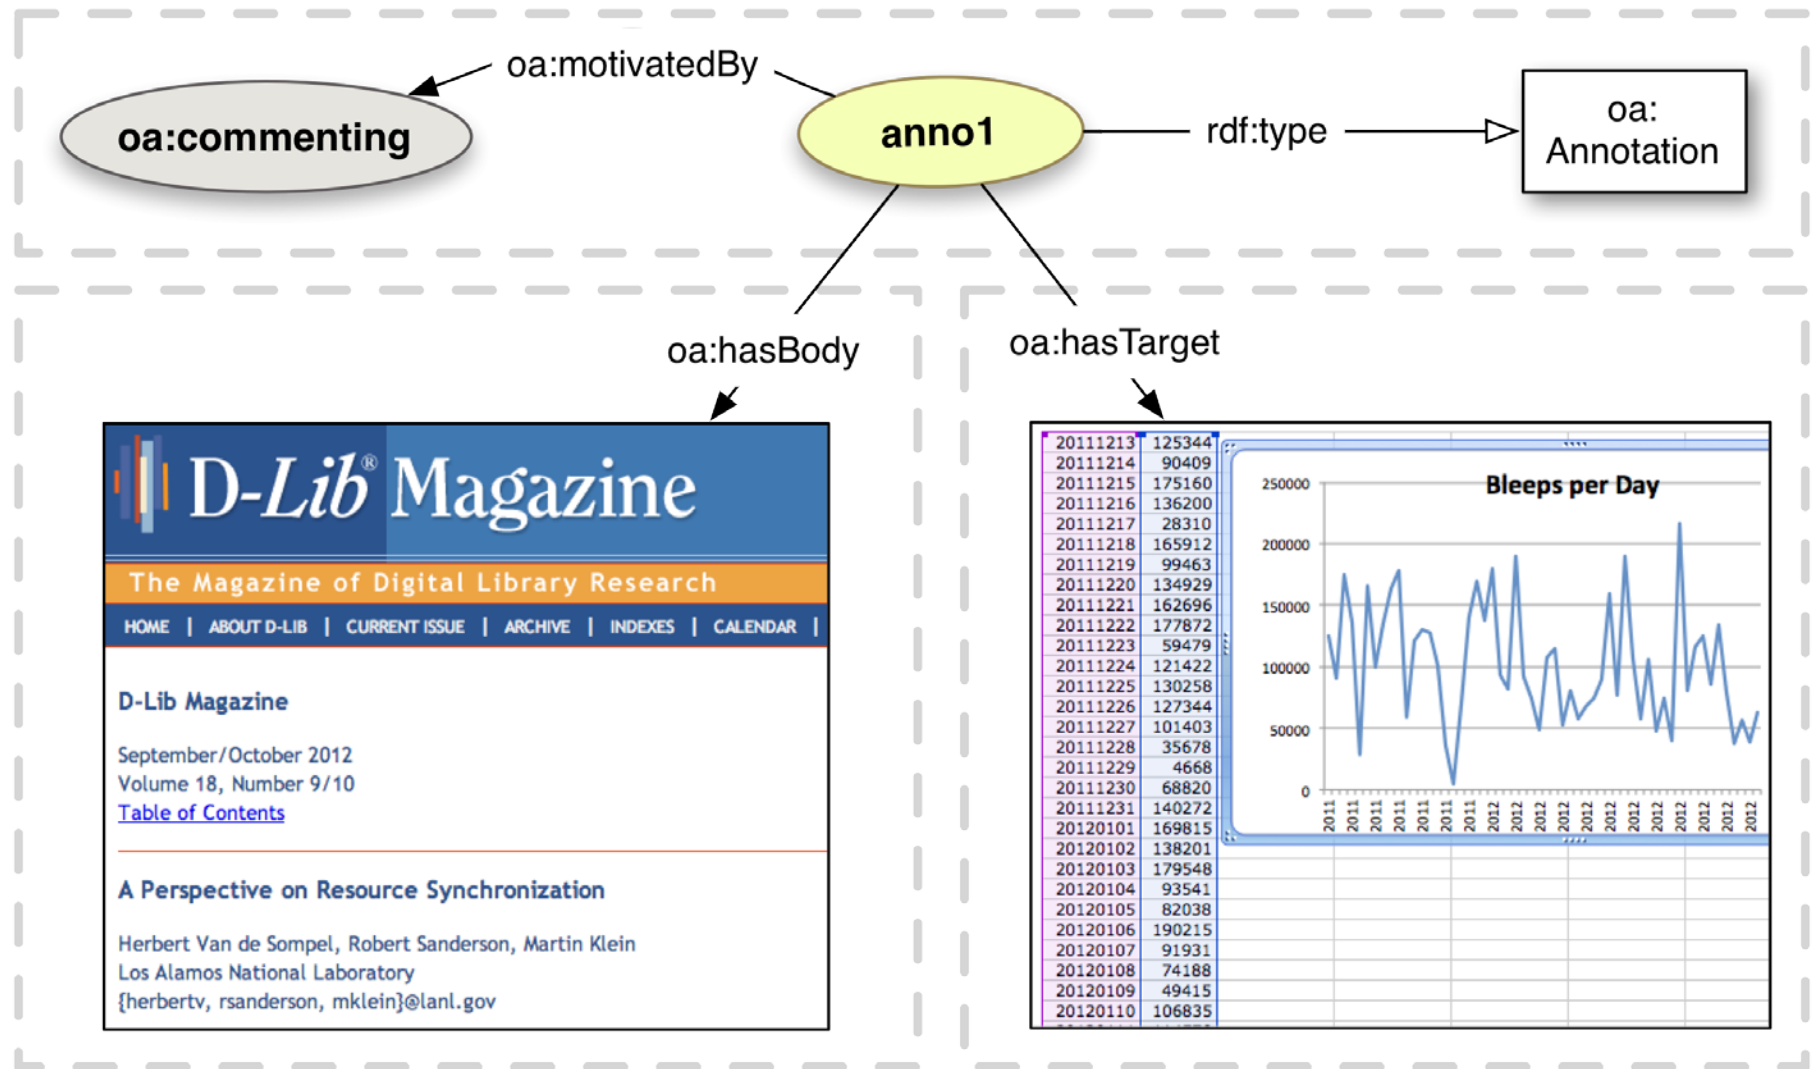

<http://www.openannotation.org/spec/core/>

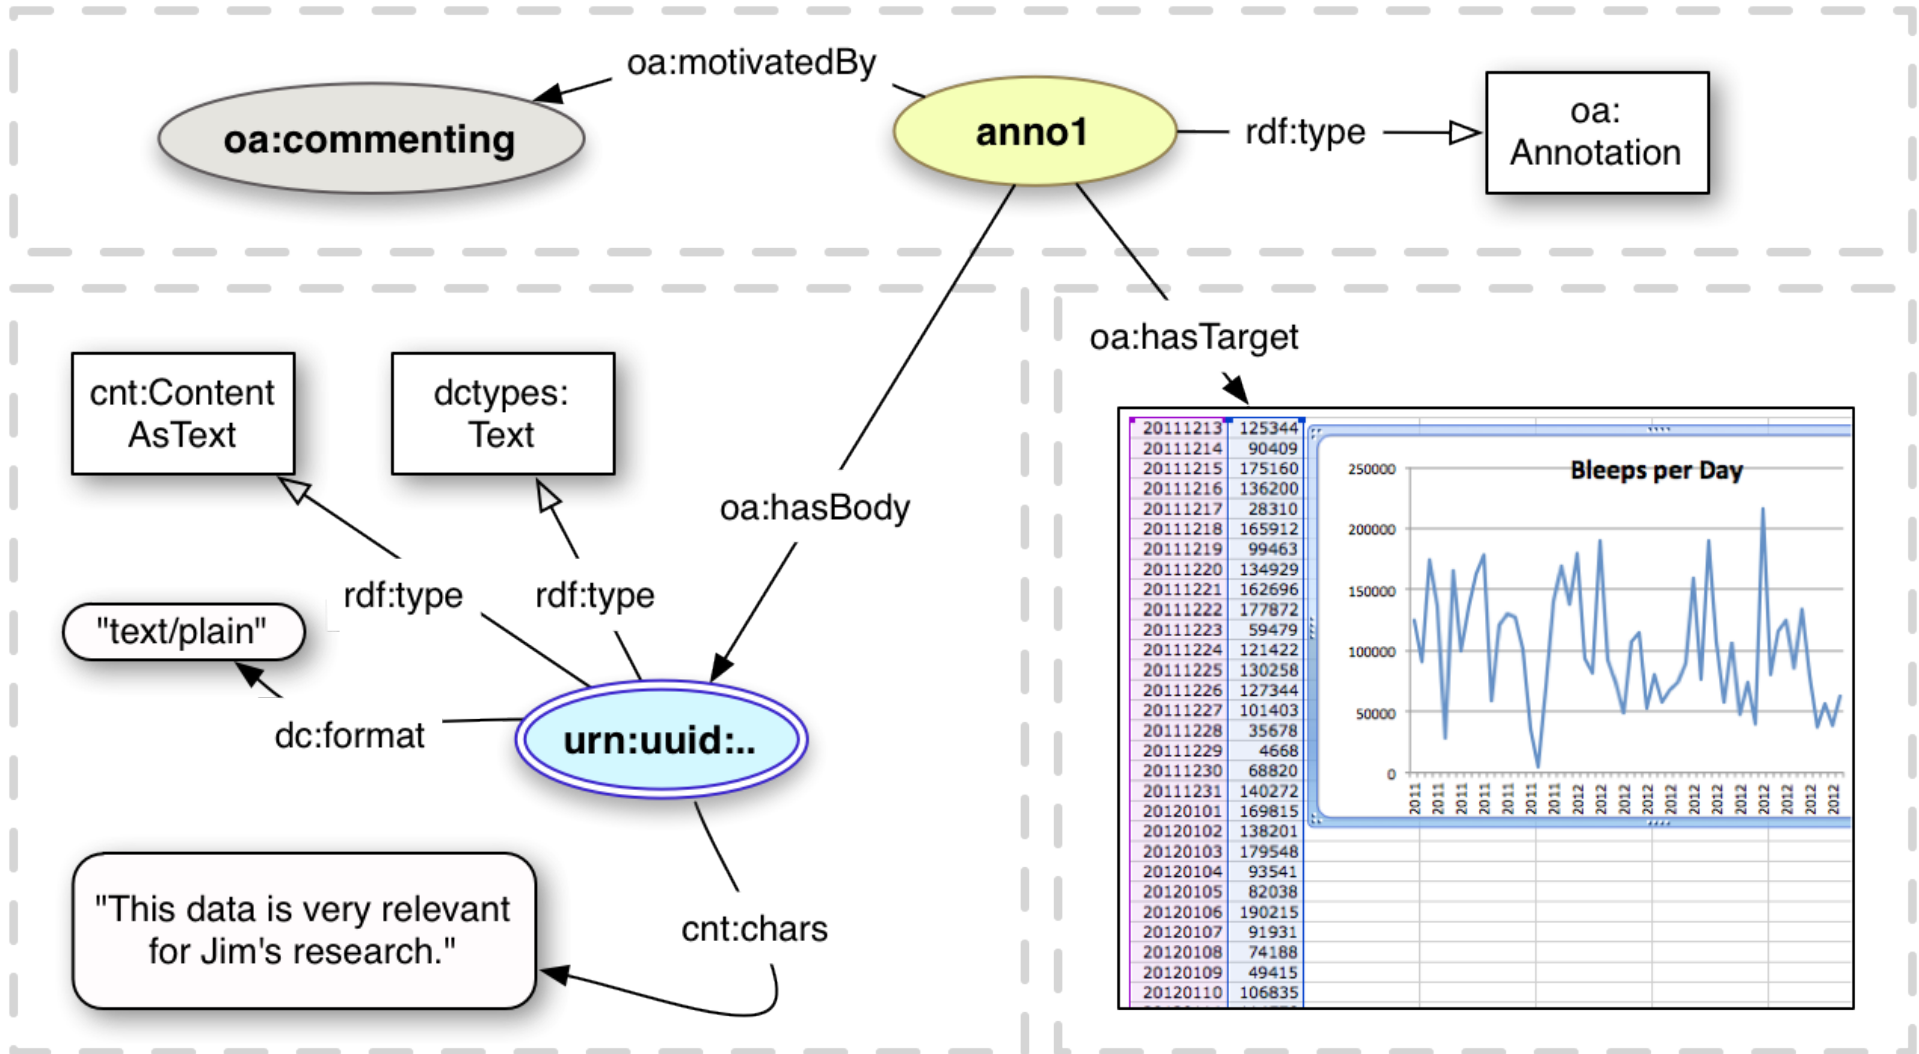

Use Case: Bookmarking

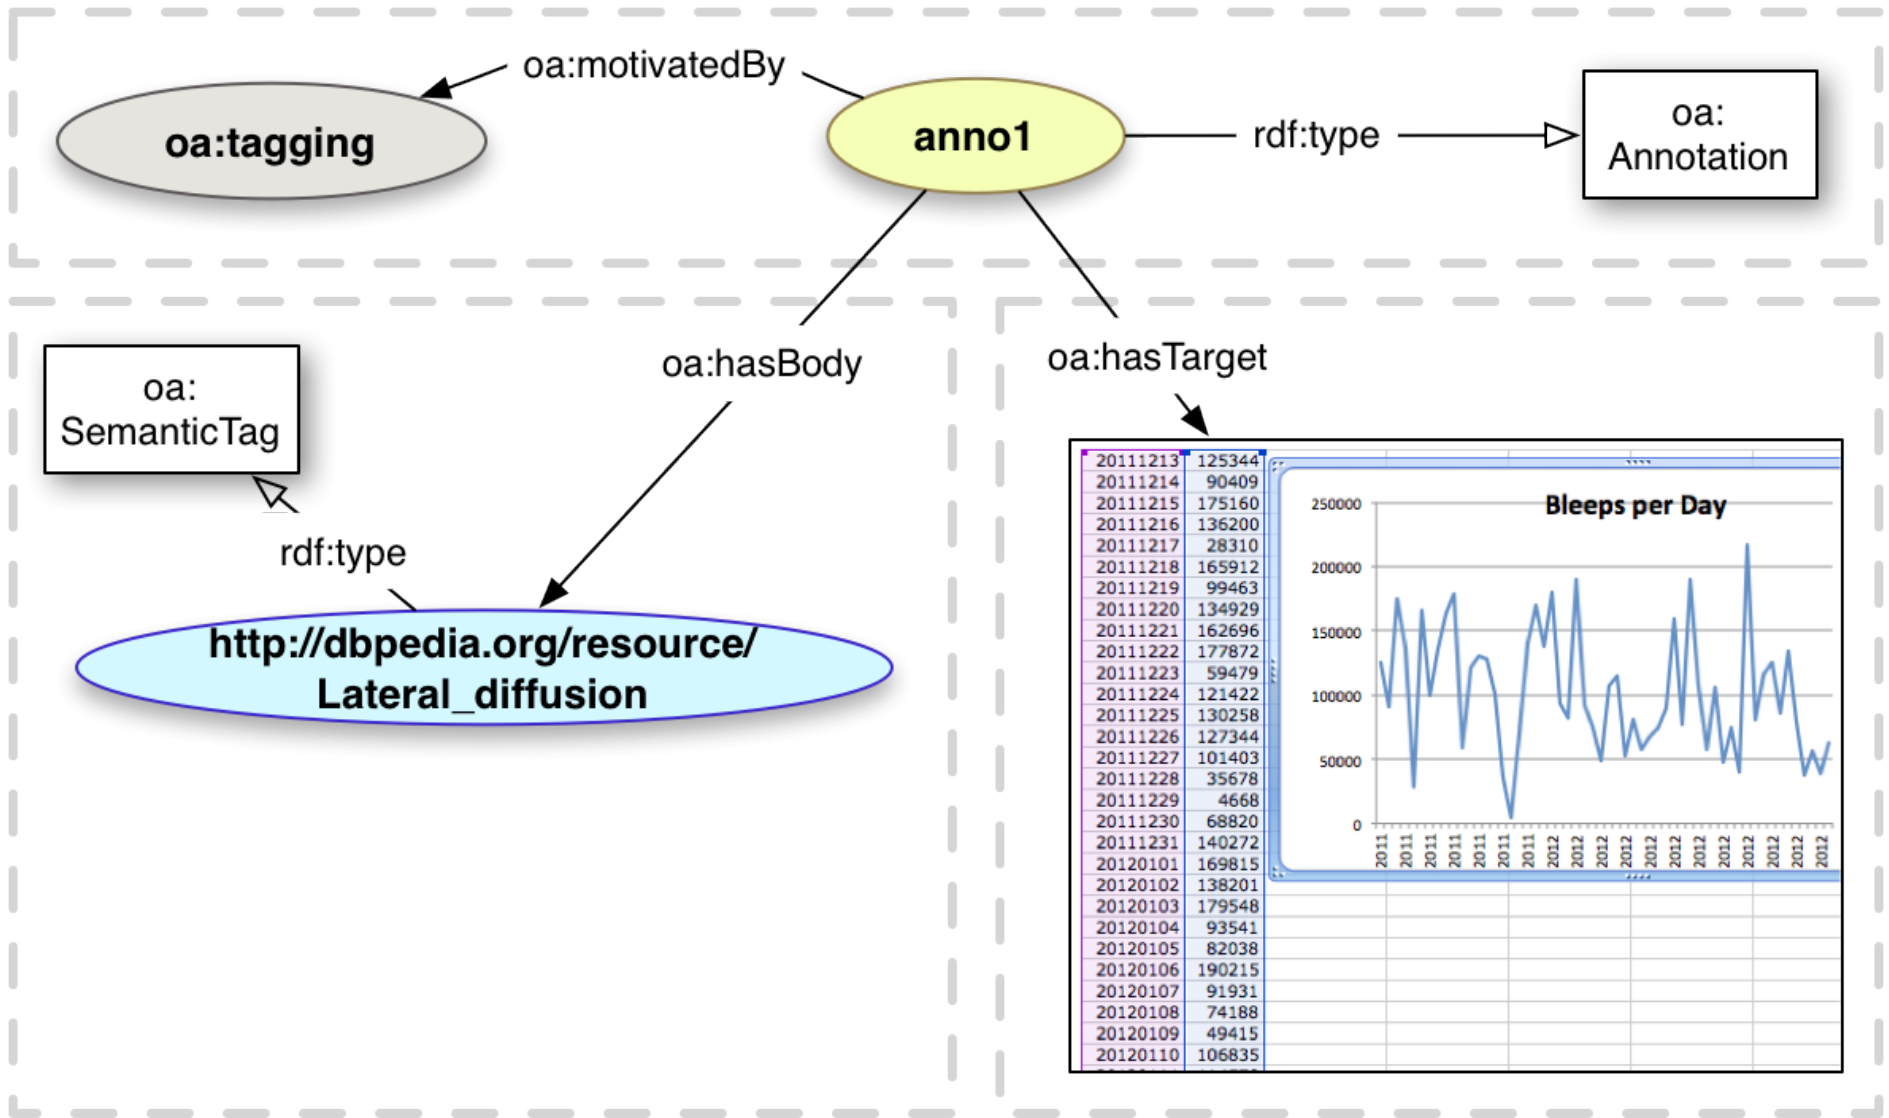

Use Case: Commenting

Use Case: Commenting

Use Case: Tagging

Further Specification of Resources

Specific Body and Specific Target resources identify the region of interest, and/or the state of the resource.

Need to be able to describe the state of the resource, the segment of interest, and potentially styling hints for how to render it.

We introduce:

State	Describes how to retrieve representation
Selector	Describes how to select segment
Style	Describes how to render/process segment
Scope	Describes context of the resource

States and Selectors

States:

TimeState	Resource State at given Time
HttpRequestState	Headers used to request representation

Selectors:

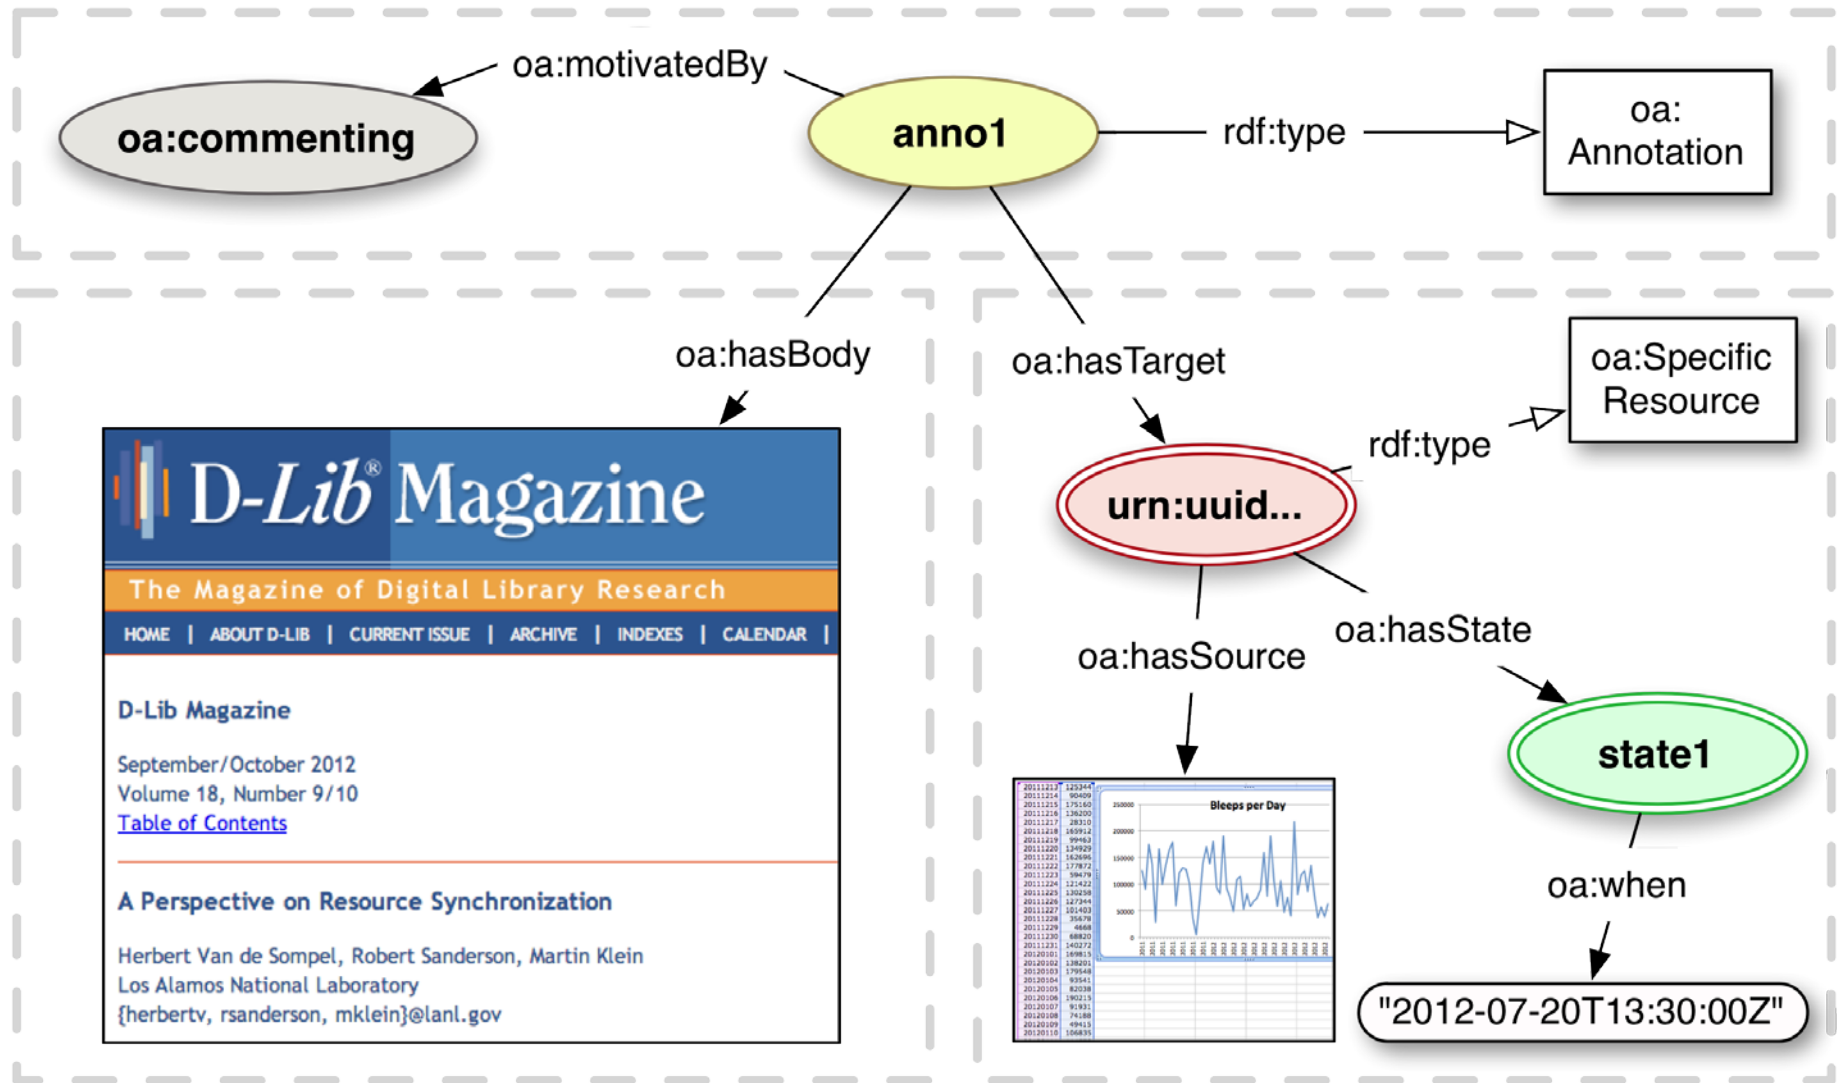

FragmentSelector	Description based on URI Fragment
TextPositionSelector	Position in character stream
TextQuoteSelector	Quotation of selected text
DataPositionSelector	Position in byte stream
SvgSelector	SVG defined area

Plus community defined classes

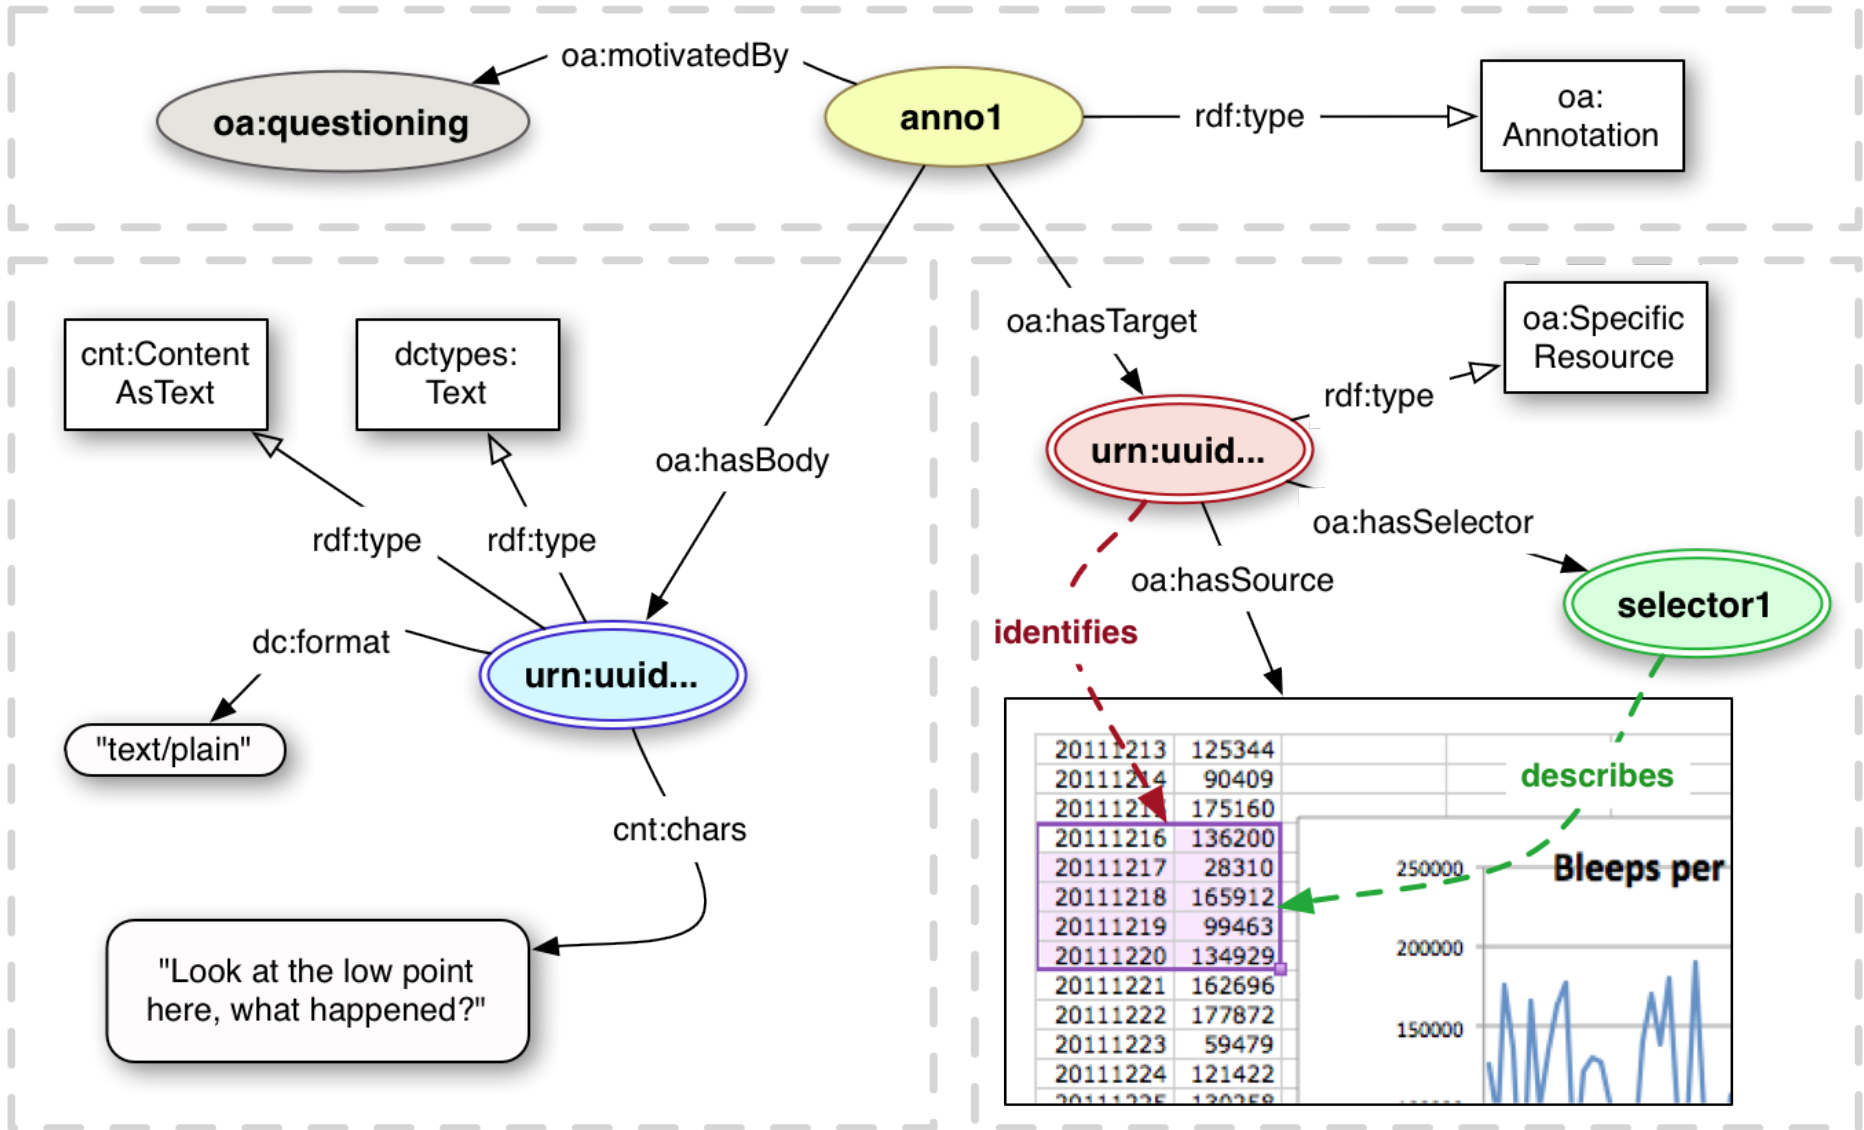

Commonly used will be recommended by the specification

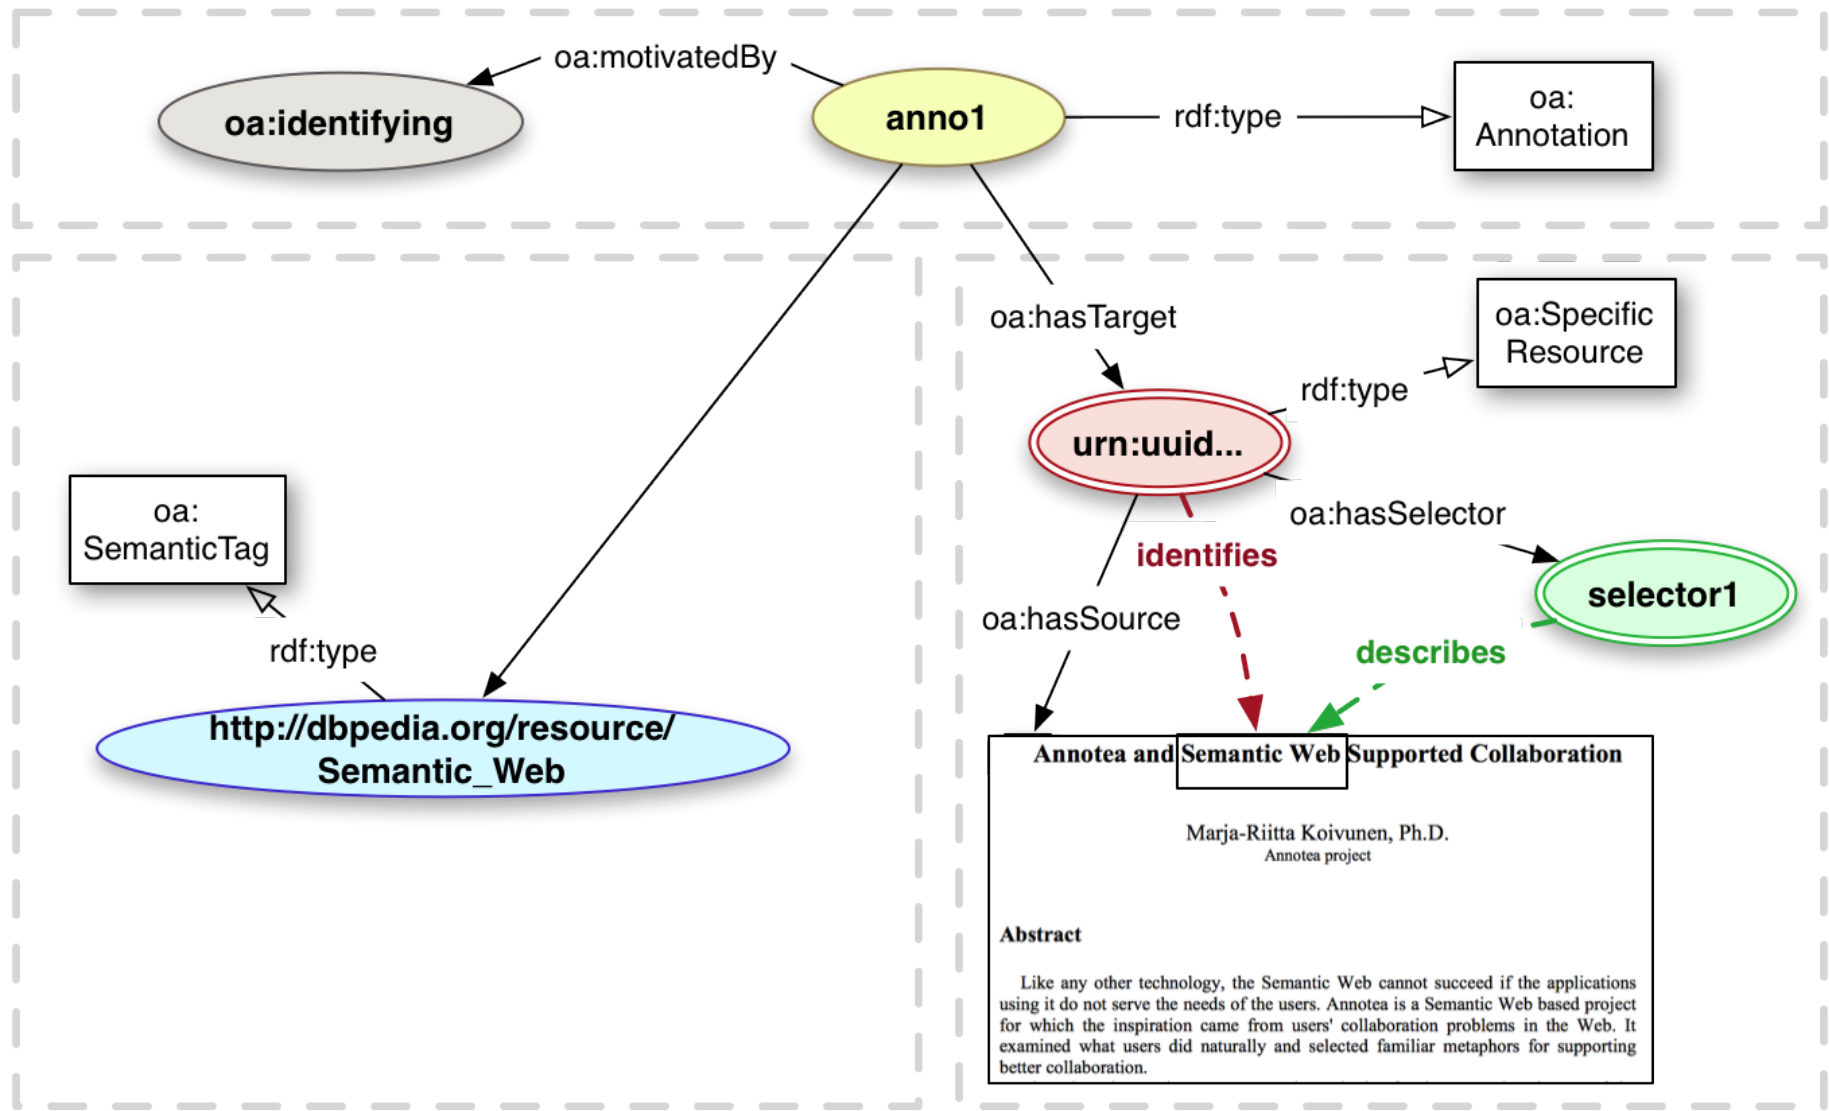

Use Case: Changing Content at Same URI

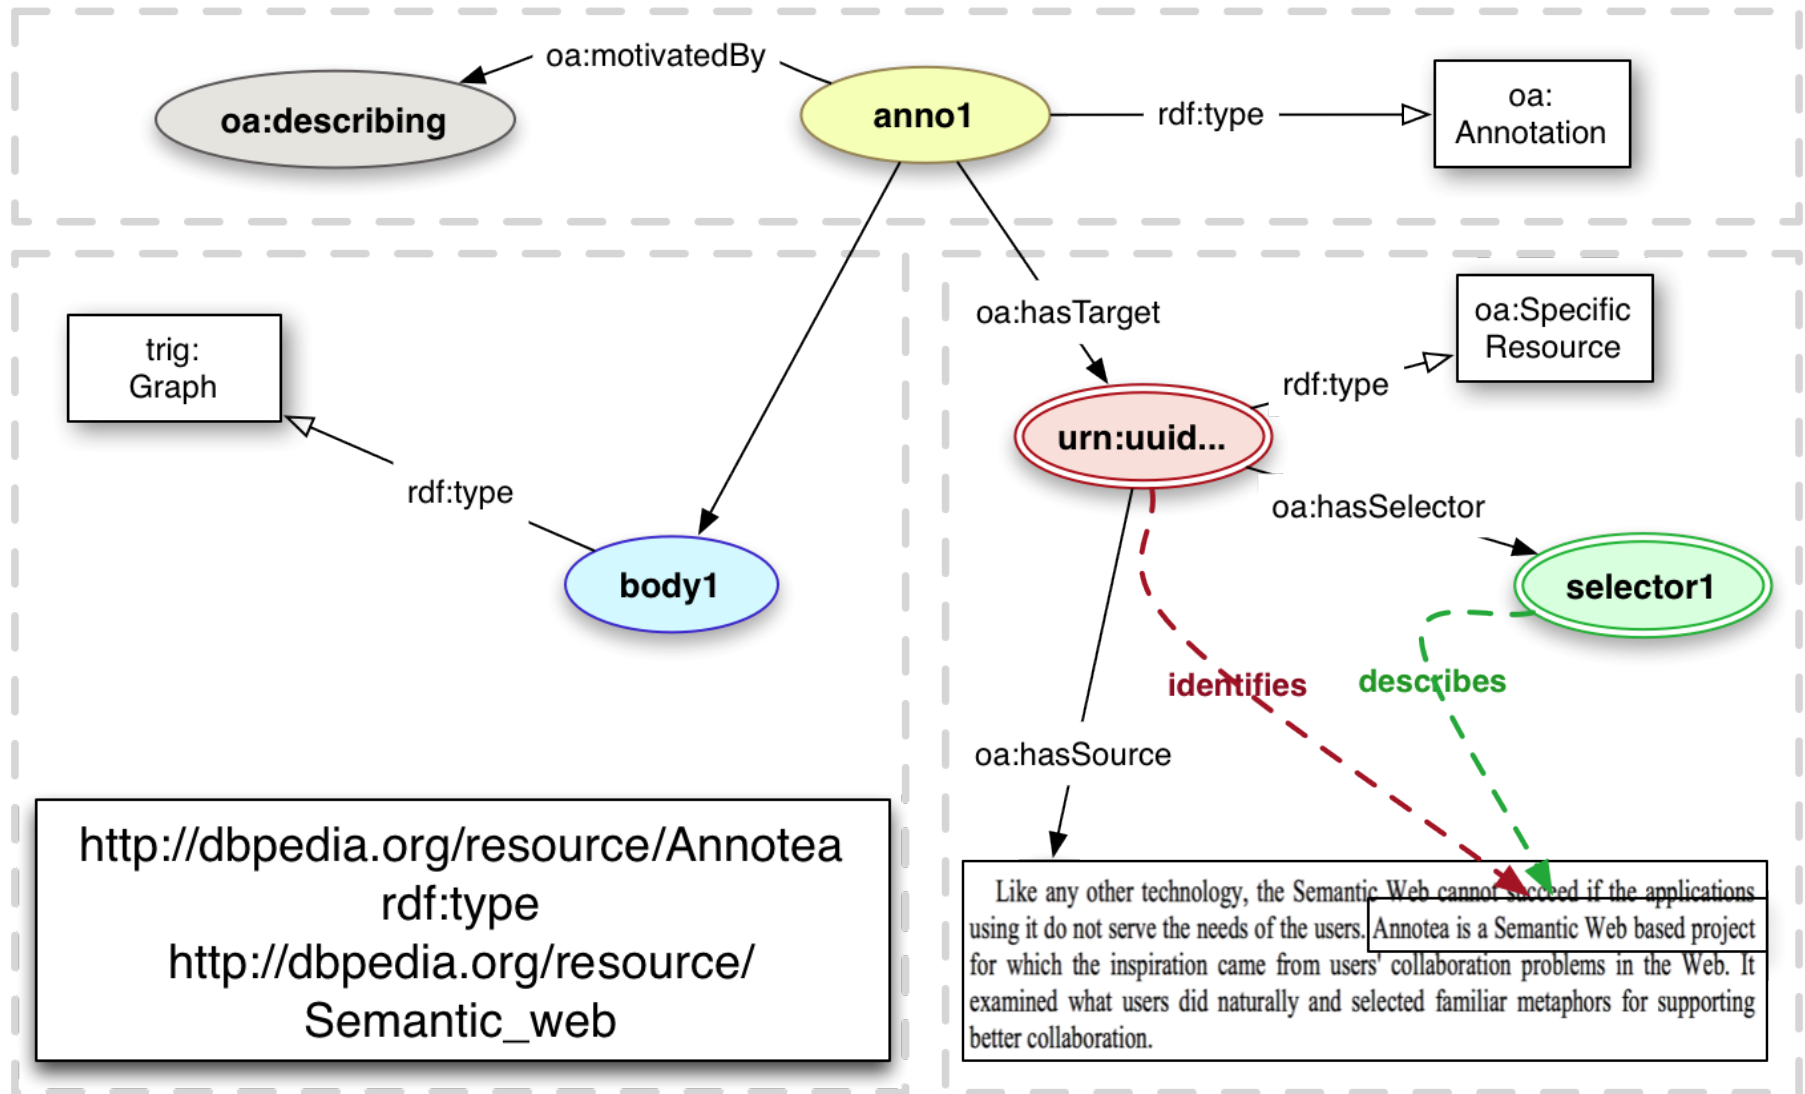

Use Case: Segment of Interest

Use Case: Text as Data – Entity Extraction

Use Case: Text as Data – Semantic Transcription

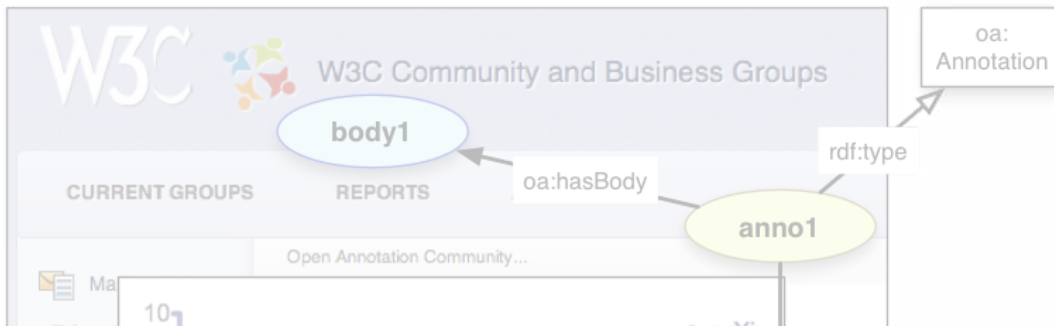

Other Dataset Use Cases?

- Highlight a range of data
- Noting errors
- Tag a dataset, either textually or semantically
- Link paper to its dataset, or vice versa
- Comment comparing two or more data ranges
- Annotations that span across multiple datasets
- Migrating personal notes across platforms
- ...
