

D9.7: Final Report on Use of HTTP Protocol as Standard within EUDAT

WP:

WP9

Publication Date:

02/03/2018

This document describes two pieces of work. We first describe the investigation of authentication issues affecting the federation of Object Stores, and the development of a prototype for experimentation. Secondly, we describe the implementation and deployment of the HTTP-API, providing a modern RESTful interface to a growing set of B2 services.

Contract:

EUDAT2020 (2015-2018)
