

Integrate & Deploy RDM services for my community

Any research community or infrastructure may **integrate & deploy** EUDAT services. This allows them to use the EUDAT services deploying them at their specific sites. Three EUDAT services are part of this offer: ***B2SAFE***, ***B2STAGE*** and ***B2FIND***.

Integrated data centres can benefit from the features of tight integration such as:

- Choice of datacentres to federate with for B2SAFE
- Use of an own PID service within the EUDAT domain
- Optimised data transfer within the EUDAT CDI
- Tighter control of data management policies (replication, authorisation) through direct management of core services at their site

In addition to providing significant [User Documentation](#), EUDAT supports new organisations and infrastructures wishing to join EUDAT. Dedicated teams are ready to work with you. Please [contact](#) us with a support request for further information.

A complete training course on how to integrate and deploy the EUDAT services is available at eudat.eu/how-to-use-deploy-the-eudat-services
