AGORA – Service Catalogue

EUDAT operates its own Service Portfolio Management Tool (AGORA). It is a tool aimed at facilitating service management in IT service provision, and it represents a complete list of the services managed by a service provider. AGORA service catalogue represents the centrepiece for the curation of the EUDAT services. It has been developed having in mind the current EOSC recommendations for provider and resource descriptions. AGORA adheres to the Rules of Participation and has in place similar processes for the validation of Providers and Resource Profiles.

detailed service description view

AGORA – EOSC INTEGRATION

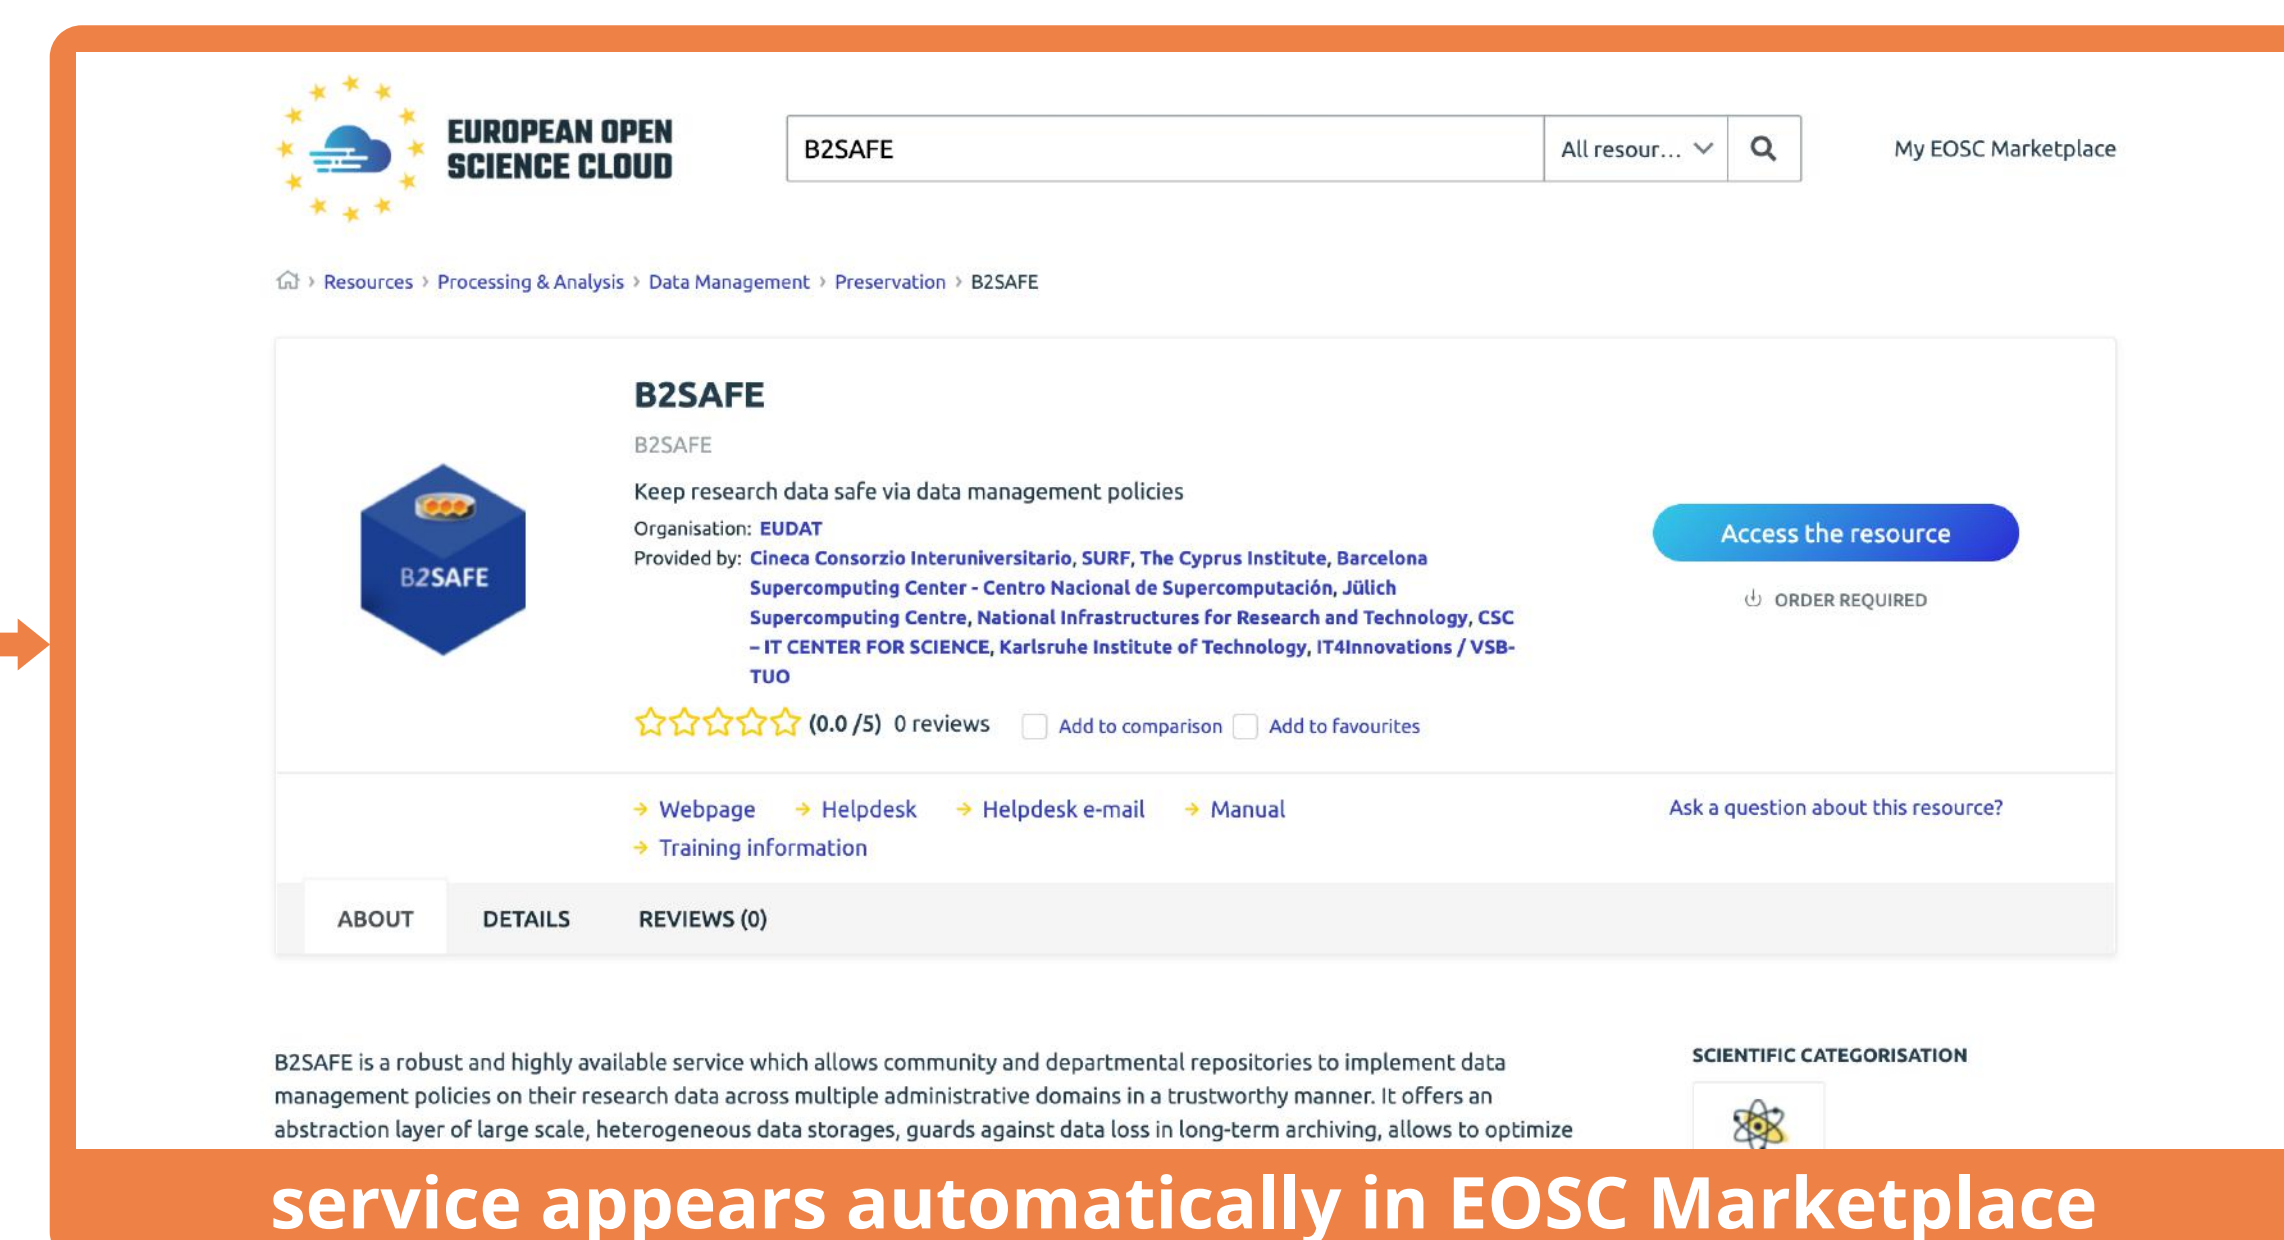

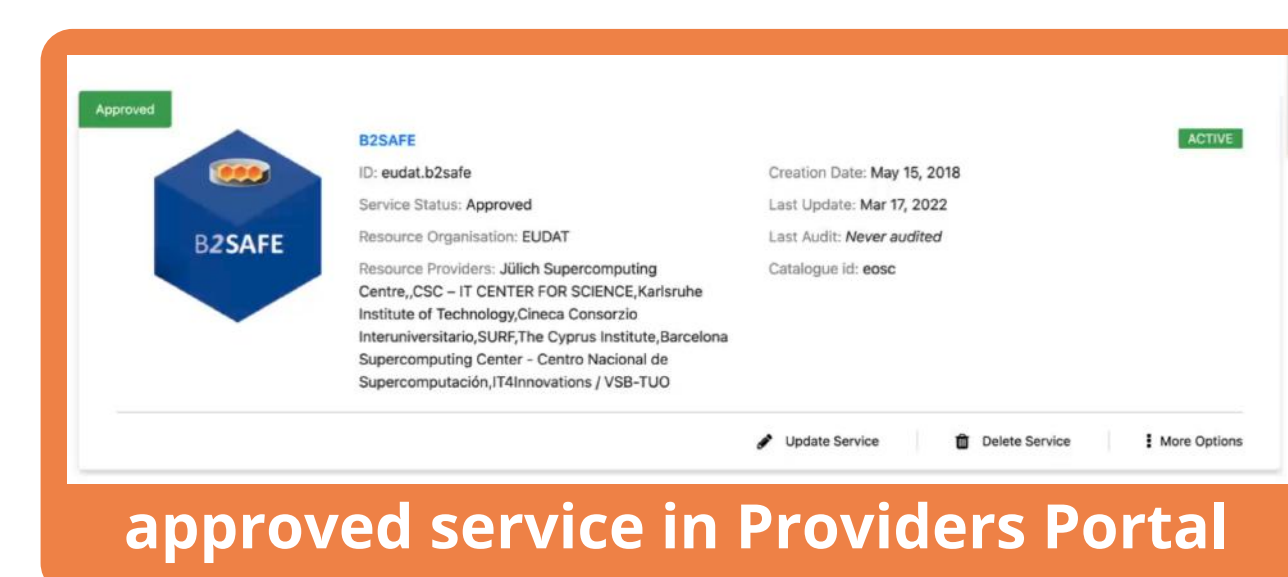

AGORA is one of the first catalogues connected with EOSC. Main benefits of this integration:

- Allows to **curate** EUDAT services **independently** of the EOSC Portal
- **Onboards quickly and efficiently** resources and providers via the catalogue integration
- **Advertise** the EUDAT services on EOSC Portal
- **Reach a wider user base** to promote the EUDAT Services.
- Adopted and implemented **EOSC Profiles v4.0** specification.

It supports 3 administration roles :

- **Provider Admin** responsible for the Provider profile information
- **Resource Admin** responsible for the Resource profile information
- **Portfolio Admin** curates the content & proceeds to publish
