

RSpace

EUDAT CONFERENCE
2022

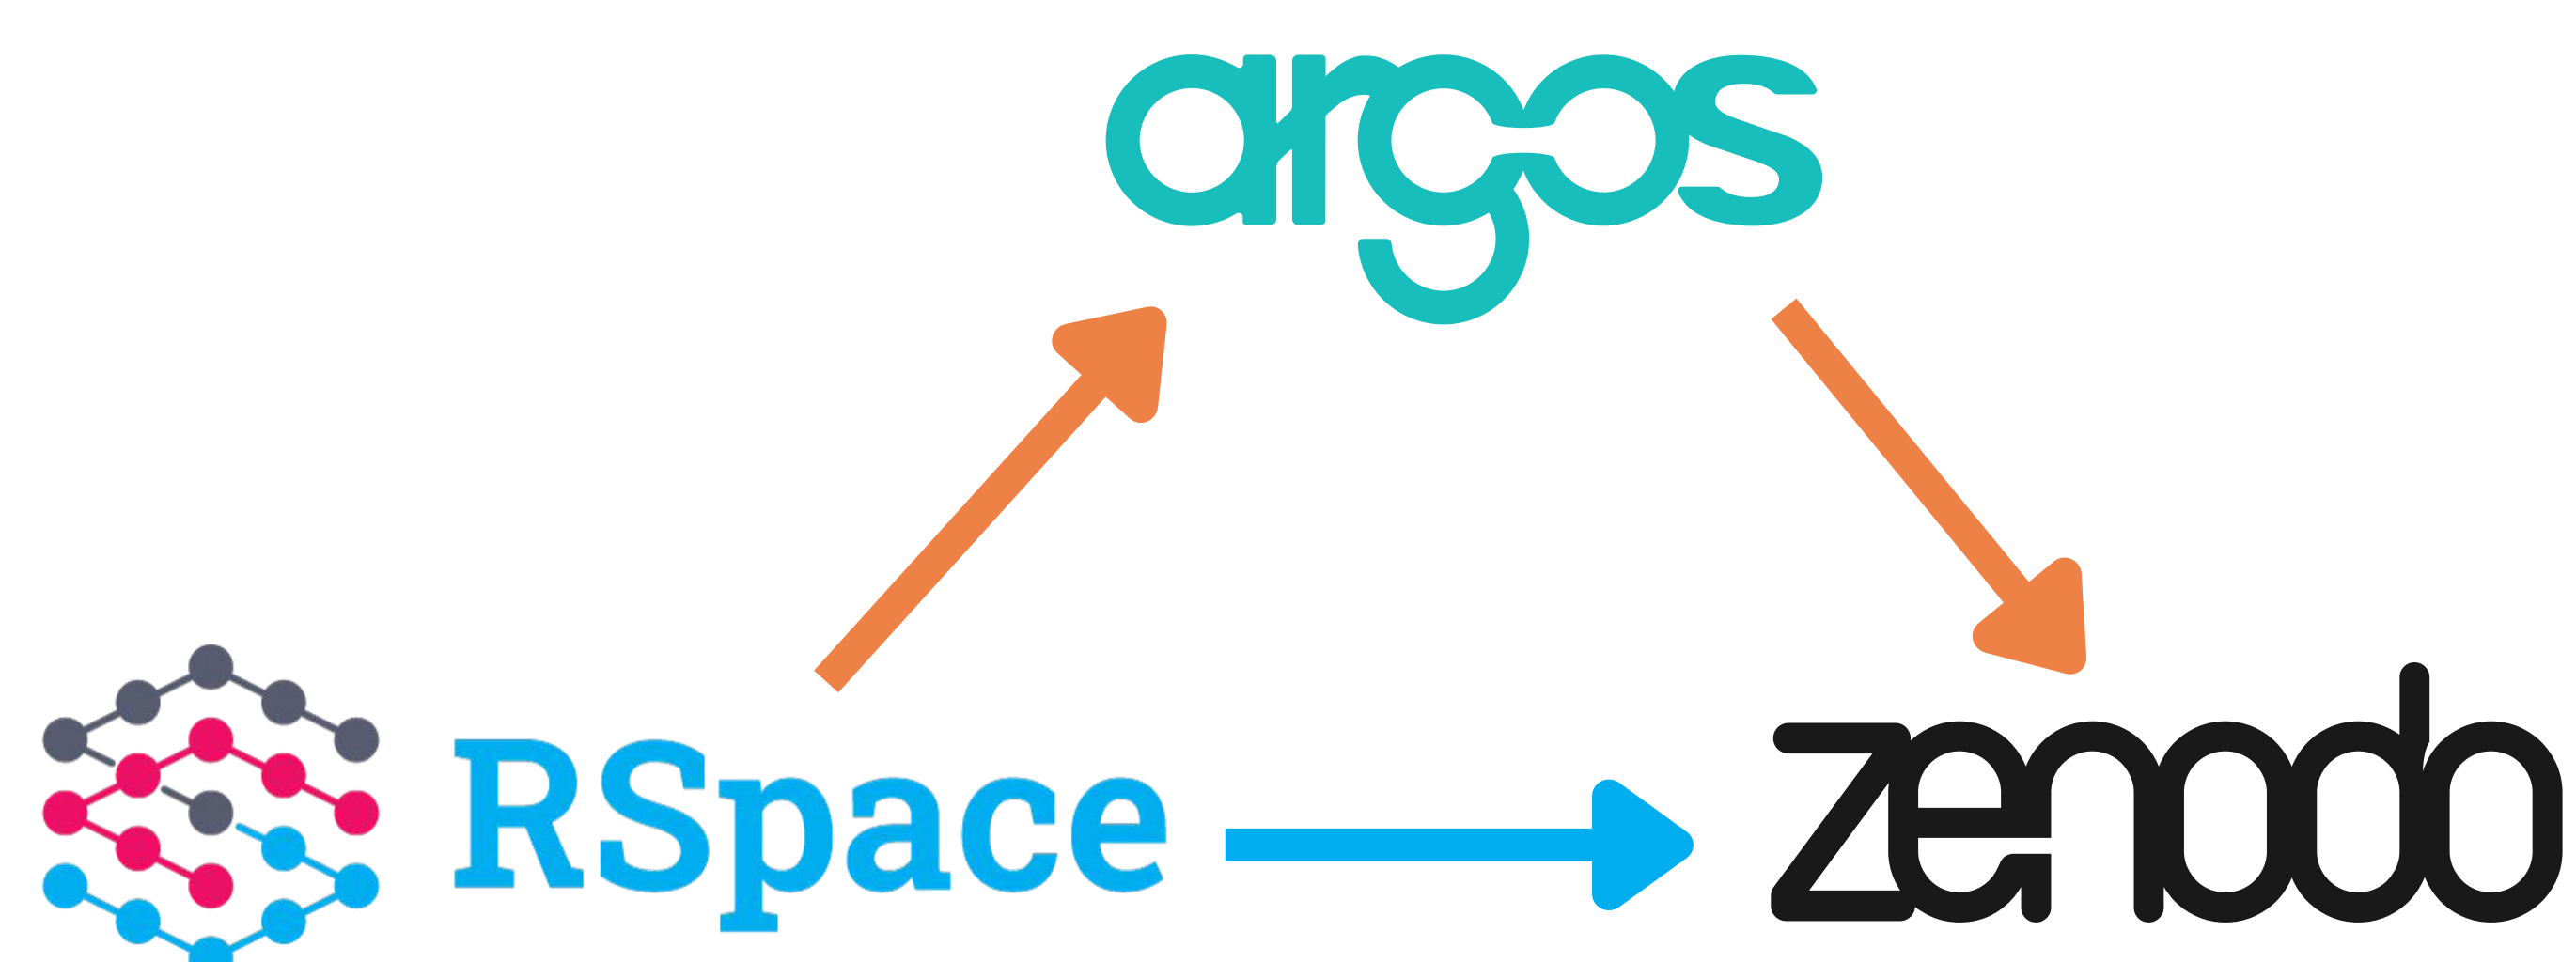

13-15 Sept. 2022 | Athens, Greece

Built with powerful integrations that enhance reproducibility through a connected research workflow.

What is RSpace?

- ✓ An **electronic research notebook** with a fully integrated inventory system.
- ✓ An **ecosystem of integrations** that make RSpace a conduit for experimental and sample data, connecting data management planning, active research and public data sharing.

Now offering support for direct integrations with Zenodo and a connected workflow through Argos to Zenodo.

EOSC DIH Pilot

- ✓ RSpace will be included in the **upcoming EOSC DIH Pilot (starting September 2022)**
- ✓ The pilot will focus on **integrations** between **RSpace, Argos, and Zenodo**, with a focus on **enhancing reproducibility**.
- ✓ Consideration will be given to including **RSpace** as a service in **OpenAire Nexus**, alongside Zenodo, Argos and a range of other services.

OpenAire Nexus aims:

To **provide a set of services** in order to implement and accelerate Open Science.

To **integrate researchers workflows**, making it easier for them to accept and uptake Open Science practices of openness and FAIRness.

To give **libraries and research communities** the tools they need to make their **content more visible and discoverable**.

To **assist policy makers** to better understand the environment of **Open Science** including new incentives, scientific reward criteria, and impact indicators.

To **foster innovation**, by providing SMEs with **open data** about scientific production.
