EUDAT, a user-driven, service-oriented, trusted, secure and sustainable data infrastructure, offers solutions for finding, sharing, storing, replicating, staging and performing computations with primary and secondary research data. EUDAT provides data solutions that would be difficult for research communities to provide on their own thereby reducing costs and allowing communities to make investments in community specific services and developments.

Who is EUDAT for?
Community-specific data repository managers can join the data infrastructure to archive, replicate, process and catalogue data on behalf of their community. While researchers (from both academia and industry), citizen scientists and policy makers can share, discover and reuse data via EUDAT.

EUDAT’s shared services and storage resources are distributed across 15 European nations with data stored alongside some of Europe’s most powerful supercomputers.
